MH

Summary

B.Tech Information Technology student with a strong foundation in software development, data analysis, and AI/ML concepts. Experienced in building responsive web and mobile applications, developing interactive 2D and 3D websites, and working with large datasets to extract meaningful insights. Completed an internship in AI/ML and Data Analytics, where complex data was simplified and machine learning algorithms were applied to derive actionable results. Passionate about learning new technologies, solving real-world problems, and creating scalable, user-focused digital solutions.

Experience

Aiml Intern

05/2024 - 01/2026

Worked on analyzing and simplifying large, complex datasets to extract meaningful insights and patterns. Performed data cleaning, preprocessing, and transformation to improve data quality and usability. Applied multiple machine learning algorithms to identify trends, make predictions, and evaluate model performance. Assisted in interpreting analytical results and presenting actionable insights to support data-driven decision-making.

Skills

Python programming, machine learning, NoSQL databases, deep learning, front end developer, web development projects, css, javascript, experience in flutter, front end frameworks, java, c, c++, php, html, data analysis

Education

Information Technology

Atharva College of Engineering
